System Design & Hardware Commissioning Overview

Step 1: Design your system online

The Fulham eliteBlue website allows you to easily upload floor plans and use them for creating custom lighting controls by room using Fulham's intuitive design templates.

Step 2: Commission your hardware in the field

Once you open the app on your iPhone or iPad, your project will automatically appear and identify the rooms you need to commission. The Fulham eliteBlue app automatically identifies all the Bluetooth Bridges and supporting Enocean Switches.

0-10V Bluetooth Bridge

Wireless Enocean Switch

You can also invite collaborators to allow your idea to be shared and later securely designate a primary custodian of the system.
