

FOR IMMEDIATE RELEASE

## Fulham's HotSpot Constant Power LED Emergency Driver Certified for Title 20 in California and Oregon

New Constant Power Programmable LED Emergency Driver Complies with CEC Title 20 Regulations for Performance and Energy Savings

HAWTHORNE, Calif. – June 20, 2017 – Fulham Co., Inc., a leading supplier of lighting components and electronics for commercial and specialty applications, today announced that its HotSpot Constant Power LED Emergency Driver (Part FHSP-UNV-10P-L-SD) has been certified compliant with California Energy Commission (CEC) Title 20 Code of Regulations for small battery charger systems.

Since the Constant Power Emergency LED driver family was introduced in September 2016, it has become popular for emergency lighting due to its ease of installation and compliance with local emergency lighting standards. The new addition of FHSCP-UNV-10P-L-SD offers a versatile, reliable emergency lighting system that uses LiFePO4 batteries to deliver a minimum of 90 minutes of light in case of a power outage. It can be programmed for lower light output for longer emergency runtimes. The HotSpot Constant Power programmable emergency driver has been certified to meet the CEC Title 20 specifications outlined for small battery charger systems. Title 20 affects installations in California and Oregon.

"Fulham is committed to taking the lead in supporting energy efficiency standards and ensuring that our customers have products that comply with all necessary regulations," said Russ Sharer, Vice President of Global Marketing for Fulham. "Our constant power LED emergency lighting

system has been popular since it began shipping, and now, with Title 20 compliance, our distributors and partners have an excellent emergency lighting solution for one of the most energy-aware markets in the world.”

The HotSpot Constant Power Programmable LED Emergency Driver is one of Fulham’s clever, programmable lighting products. In its default setting, the battery will deliver maximum output, e.g. a 5W battery will deliver 90 minutes of power at 5W, or a 10W battery will deliver 10W of power for 90 minutes, but the settings can be programmed to provide a longer runtime. For example, programming the driver for 5W emergency output while connected to a 10W battery will result in 180 minutes of emergency illumination. This allows luminaire OEMs and contractors to use one product for many applications and situations. The HotSpot Constant Power emergency light also features a bicolor illuminated test switch with self-diagnostics to promote greater reliability and safety.

The new HotSpot Constant Power Programmable LED emergency drivers is available with four battery options, ranging from 5W to 10W rated output. The unit has UNV, 50/60Hz input with an output voltage from 16 to 55VDC. The unit provides constant output power, automatically adjusting the current as needed, and can be installed in minutes.

In addition to Title 20, the HotSpot Constant Power Programmable LED Emergency Driver complies with international safety regulations, including cURus, cULus, CE and ENEC. All HotSpot units come with Fulham’s 5-year warranty.

Fulham offers an extensive collection of emergency lighting products that comply with international standards. For more information, visit [www.fulham.com](http://www.fulham.com).

## **About Fulham**

Fulham Co., Inc. is a leading global provider of intelligent, socially-conscious sustainable commercial lighting components and electronics for use in commercial general lighting, parking structure, signage, horticultural, UV and other applications. The company develops and

manufactures a variety of award-winning LED and emergency products, as well as legacy products across multiple lighting platforms. Fulham sells its lighting solutions worldwide through original equipment manufacturers (OEMs) and electrical equipment distribution channels. Headquartered in Hawthorne, Calif., the company has sales and/or manufacturing facilities in the Netherlands, China, India and the UAE.
